Advantageous Effects of Invention

[0022]

Precise calculation of potential energy in substances and light, creation of timeless condition and creation of reverse time.

Brief Description of Drawings

[0023]

[Fig.1] The clock-model of time

[Fig.2] The water-model of time

[Fig.3] The graph of gradual diminution of mass

[Fig.4] The graph of gradual diminution of velocity

[Fig.5] The graph of potential energy and time for a substance

[Fig.6] The graph of potential energy and time for light

Description of Embodiments

[0024]

Precise calculation of potential energy in substances and light, creation of timeless condition and creation of reverse time.

Industrial Applicability

[0025]

Application to basic and advanced research, accurate measurement of potential energy in substances and light, creation of timeless condition and creation of reverse time.
